Nesbuvir

Cat. No.: A3655
CAS No.: 691852-58-1
Formula: C22H23FN2O5S
M.Wt: 446.49
Synonyms: HCV 796; HCV-796; HCV796, Nesbuvir
Target: Proteases
Pathway: HCV Protease
Storage: Store at -20°C

Solvent & Solubility

≥22.3 mg/mL in DMSO; insoluble in H2O; ≥97.8 mg/mL in EtOH with gentle warming

Nesbuvir is an inhibitor of the hepatitis C virus (HCV) nonstructural protein 5B (NS5B) polymerase. It has potent and specific inhibitory effect against the HCV RdRp, thus inhibiting RNA synthesis. When Nesbuvir is used in combination with boceprevir, it decreases the frequency with which resistant variants occur in Huh7-BB7 cells bearing a subgenomic genotype 1b HCV replicon.

### In Vivo

**Animal experiment**

**Animal models:** Urokinase plasminogen activator (uPA)/severe combined immunodeficient (SCID) mice

**Dosage form:** Oral administration, 50 mg/kg, three times daily for 5 days

**Applications:** Treating mice with Nesbuvir resulted in a 2.02 ± 0.55 log10 decrease of HCV titer with one mouse below the level of detection, whereas HCV levels in the control group of mice were relatively stable (0.26 ± 0.16 log10 decline).

**Other notes:** Please test the solubility of all compounds indoor, and the actual solubility may slightly differ with the theoretical value. This is caused by an experimental system error and it is normal.

Specific storage and handling information for each product is indicated on the product datasheet. Most APExBIO products are stable under the recommended conditions. Products are sometimes shipped at a temperature that differs from the recommended storage temperature. Short-term storage of many products are stable in the short-term at temperatures that differ from that required for long-term storage. We ensure that the product is shipped under conditions that will maintain the quality of the reagents. Upon receipt of the product, follow the storage recommendations on the product data sheet.
