DAPT (GSI-IX)

Cat. No.: A8200
CAS No.: 208255-80-5
Formula: C23H26F2N2O4
M.Wt: 432.46
Synonyms: gamma-Secretase Inhibitor IX, DAPT, GSI-IX
Target: Neuroscience
Pathway: Amyloid β
Storage: Store at -20°C

Please refer to the solubility information to select the appropriate solvent.

Biological Activity

Shortsummary
γ-secretase inhibitor, potent and specific

IC₅₀ & Target
20 nM (Aβ)

Cell Viability Assay

Cell Line: SHG-44 human glioma cell line
Preparation method: The solubility of this compound in DMSO is >10 mM. General tips for obtaining a higher concentration: Please warm the tube at 37 °C for 10 minutes and/or shake it in the ultrasonic bath for a while. Stock solution can be stored below -20°C for several months.
Reacting conditions: 5d; 1.0 μM
Applications: Cell viability in each group was detected by MTT. Compared with those in group...
A (control), proliferation of SHG-44 cells in group B (0.5 μM), C (1 μM), D (5 μM) and E (10 μM) were inhibited by DAPT. For group B and A, the results were significantly different (P < 0.05). It indicated that DAPT is a concentration-dependent inhibitor that may obviously inhibit SHG-44 cells proliferation. As concentration of DAPT higher than 1.0 μmol/L showed no more obvious disparities in cell inhibition, concentration of 1.0 μmol/L was our priority.

### Animal experiment

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Dosage form:</td>
<td>10 mg/kg/day; subcutaneously injected</td>
</tr>
<tr>
<td>Applications:</td>
<td>CT26 colon adenocarcinoma cells (5 × 10⁵ cells) in 500 μL of Phosphate buffer solution (PBS) were inoculated subcutaneously into the dorsum of all mice. Administration of DAPT significantly reduced serum sVEGFR1, while could not change serum VEGF concentration in control mice. Immunohistochemical study of the tumors showed that CD31 positive cells were reduced after DAPT administration (280.6 ± 81 vs. 386 ± 59.9 CD31 positive cells/mm²), although it was not statistically significant.</td>
</tr>
<tr>
<td>Other notes:</td>
<td>Please test the solubility of all compounds indoor, and the actual solubility may slightly differ with the theoretical value. This is caused by an experimental system error and it is normal.</td>
</tr>
</tbody>
</table>

Specific storage and handling information for each product is indicated on the product datasheet. Most APExBIO products are stable under the recommended conditions. Products are sometimes shipped at a temperature that differs from the recommended storage temperature. Short-term storage of many products are stable in the short-term at temperatures that differ from that required for long-term storage. We ensure that the product is shipped under conditions that will maintain the quality of the reagents. Upon receipt of the product, follow the storage recommendations on the product data sheet.
