

Product Name: AEBSF.HCI Revision Date: 03/31/2025

## **Product Data Sheet**

## **AEBSF.HCI**

**Cat. No.:** A2573

CAS No.: 30827-99-7

Formula: C8H10FNO2S·HCI

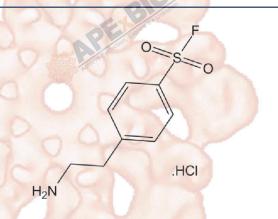

**M.Wt:** 239.69

Synonyms: AEBSF.HCI,AEBSF Hydrochloride

Target: Serine Protease

Pathway: Proteases

Storage: Desiccate at -20°C

# Solvent & Solubility

≥12 mg/mL in DMSO, ≥15.73 mg/mL in H2O, ≥23.8 mg/mL in EtOH with gentle warming

	9-4					
In Vitro	Preparing Stock Solutions	Mass				
		Solvent	1mg	5mg	10mg	
		Concentration				
		1 mM	4.1721 mL	20.8603 mL	41.7206 mL	
		5 mM	0.8344 mL	4.1721 mL	8.3441 mL	
		10 mM	0.4172 mL	2.0860 mL	4.1721 mL	

Please refer to the solubility information to select the appropriate solvent.

# **Biological Activity**

obtaining a higher concentration: Please warm the tube at 37°C for 10 minutes	Shortsummary	Serine protease inhibitor		
Cell Line: K695sw, HS695 and SKN695 cells  Preparation method: The solubility of this compound in DMSO is ≥798.97mg/mL. General tips for obtaining a higher concentration: Please warm the tube at 37°C for 10 minutes	IC <sub>50</sub> & Target			
Preparation method:  The solubility of this compound in DMSO is ≥798.97mg/mL. General tips for obtaining a higher concentration: Please warm the tube at 37°C for 10 minutes	In Vitro	Cell Viability Assay		
obtaining a higher concentration: Please warm the tube at 37°C for 10 minutes		Cell Line:	K695sw, HS695 and SKN695 cells	
In Vitro		Preparation method:	The solubility of this compound in DMSO is ≥798.97mg/mL. General tips for	
		chave Perfection	obtaining a higher concentration: Please warm the tube at 37°C for 10 minutes	
			and/or shake it in the ultrasonic bath for a while. Stock solution can be stored	
below -20°C for several months.			below -20°C for several months.	
Reacting conditions: 0, 0.1, 0.3, 0.6, 0.8, 1.0 and 1.2 mM; 20 mins		•		
Applications: AEBSF was found to inhibit Aβ production in various cell lines. In K293 cells		1.1	AEBSF was found to inhibit Aβ production in various cell lines. In K293 cells	

		·	
		transfected with βAPP695 (K695sw), AEBSF showed dose-dependent	
		reduction of Aβ with the IC50 value of about 1 mM. In HS695 and SKN695 cells	
		transfected with wild-type APP695, AEBSF showed inhibition effect with IC50	
		value of about 300 $\mu$ M. AEBSF was also found to increase $\alpha$ -cleavege and	
		inhibit β- cleavage.	
	Animal experiment		
	Animal models:	SD rats	
	Dosage form:	Intrauterine (5 mg or 10 mg AEBSF per injection) or tail vein (10 mg AEBSF per	
		rat) administration on day 3 of pregnancy	
In Vivo	Applications:	According to the number of visible implanted embryos on day 8 of pregnancy, it	
		was shown that AEBSF inhibited embryo implantation in rat.	
	Other notes:	Please test the solubility of all compounds indoor, and the actual solubility may	
		slightly differ with the theoretical value. This is caused by an experimental	
		system error and it is normal.

### Caution

#### FOR RESEARCH PURPOSES ONLY.

#### NOT FOR HUMAN, VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

Specific storage and handling information for each product is indicated on the product datasheet. Most APEXBIO products are stable under the recommended conditions. Products are sometimes shipped at a temperature that differs from the recommended storage temperature. Shortterm storage of many products are stable in the short-term at temperatures that differ from that required for long-term storage. We ensure that the product is shipped under conditions that will maintain the quality of the reagents. Upon receipt of the product, follow the storage recommendations on the product data sheet.
