

## Anti-HIF1 beta Rabbit Monoclonal Antibody

### Introduction

HIF-1 $\beta$  is also known as AhR nuclear translocator (ARNT) due to its ability to partner with the aryl hydrocarbon receptor (AhR) to form a heterodimeric transcription factor complex. Together with AhR, HIF-1 $\beta$  plays an important role in xenobiotics metabolism. In addition, a chromosomal translocation leading to a TEL-ARNT fusion protein is associated with acute myeloblastic leukemia. Studies also found that ARNT/HIF-1 $\beta$  expression levels decrease significantly in pancreatic islets from patients with type 2 diabetes, suggesting that HIF-1 $\beta$  plays an important role in pancreatic  $\beta$ -cell function.
