

Anti-Stromal Interaction Molecule 1 Rabbit Monoclonal Antibody

Introduction

STIM1 is a potential tumor suppressor; defects in STIM1 may cause rhabdomyosarcoma and rhabdoid tumors. STIM1 can either homodimerize or form heterodimers with STIM2. STIM2 possesses a high sequence identity to STIM1 and can function as an inhibitor of STIM1-mediated plasma membrane store-operated Ca^{2+} entry. However, further investigation is required to elucidate the true physiological function of STIM2.
