

# Recombinant Canine Granulocyte-Macrophage Colony Stimulating Factor

## **Information**

03923 248749 Granulocyte/Macrophage Colony-Stimulating Factor, CSF-2, MGI-1GM, Pluripoietin-α Escherichia coli.		
Granulocyte/Macrophage Colony-Stimulating Factor, CSF-2, MGI-1GM, Pluripoietin- $\alpha$		
Pluripoietin-α		
scherichia coli.		
pproximately 14.2 kDa, a single non-glycosylated polypeptide chain containin 27 amino acids.		
APTRSPTLVT RPSQHVDAIQ EALSLLNNSN DVTAVMNKAV KVVSEVFDPE GPTCLETRLQ LYKEGLQGSL TSLKNPLTMM ANHYKQHCPP TPESPCATQN INFKSFKENL KDFLFNIPFD CWKPVKK		
Sterile Filtered White lyophilized (freeze-dried) powder.		
Use a manual defrost freezer and avoid repeated freeze-thaw cycles - 12 months from date of receipt, -20 to -70 °C as supplied - 1 month, 2 to 8 °C under sterile conditions after reconstitution - 3 months, -20 to -70 °C under sterile conditions after reconstitution		
yophilized from a 0.2 $\mu\text{m}$ filtered concentrated solution in PBS, pH 7.4.		
We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Reconstitute in sterile distilled water or aqueous buffer containing 0.1 % BSA to a concentration of 0.1-1.0 mg/mL. Stock solutions should be apportioned into working aliquots and stored at $\leq$ -20 °C. Further dilutions should be made in appropriate buffered solutions.		
Fully biologically active when compared to standard. The ED as determined by a cell proliferation assay using human TF-1 cells is less than 5 ng/ml, corresponding to a specific activity of > $2.0 \times 10$ IU/mg.		
Gel pack.		
Centrifuge the vial prior to opening.		
For Research Use Only! Not to be used in humans.		

## Components and Storage

Norman Contraction of the second	and a second sec		
Components received	5µg	100µg	500µg
Recombinant Canine Granulocyte- Macrophage Colony Stimulating Factor	5µg	100µg	500µg

Use a manual defrost freezer and avoid repeated freeze-thaw cycles

- 12 months from date of receipt, -20 to -70 °C as supplied
- 1 month, 2 to 8 °C under sterile conditions after reconstitution
- 3 months, -20 to -70 °C under sterile conditions after reconstitution

Quality Control	<b>O</b> mourn	
Purity	> 95 % by SDS-PAGE and HPLC analyses.	Performance and an
Endotoxin	Less than 1 EU/ $\mu$ g of rCaGM-CSF as determined as the set of the	ined by LAL method.

### Description

Granulocyte-Macrophage Colony Stimulating Factor (GM-CSF) is secreted by a number of different cell types (including activated T cells, B cells, macrophages, mast cells, endothelial cells and fibroblasts) in response to cytokine or immune and inflammatory stimulation. It was initially characterized as a growth factor that can support the in vitro colony formation of granulocyte-macrophage progenitors and has functions of stimulates the growth and differentiation of hematopoietic precursor cells from various lineages. GM-CSF has also been reported to have a functional role on non-hematopoietic cells and can induce human endothelial cells to migrate and proliferate. Additionally, it can stimulate the proliferation of a number of tumor cell lines, including osteogenic sarcoma, carcinoma and adenocarcinoma cell lines. It is reported that GM-CSF has no biological effects across species.
