

## Anti-Junctional Adhesion Molecule 1 Rabbit Polyclonal Antibody

### Introduction

Seems to play a role in epithelial tight junction formation. Appears early in primordial forms of cell junctions and recruits PAR3. The association of the PAR6-PAR3 complex may prevent the interaction of PAR3 with JAM1, thereby preventing tight junction assembly (By similarity). Plays a role in regulating monocyte transmigration involved in integrity of epithelial barrier. Involved in platelet activation. In case of orthoreovirus infection, serves as receptor for the virus.
